

Customer Retention & Churn Analysis

Objective

Analyze customer subscription data to understand customer retention and identify reasons for churn.

Dataset Overview

Total Customers: 10

Regions: North, South, East, West

Plans: Basic, Standard, Premium

Analysis

Churn Analysis: 4 customers churned. Churn rate = 40%.

Plan Performance: Basic Plan had the highest churn. Premium Plan had the lowest churn.

Customer Tenure: Customers with tenure greater than 12 months showed higher retention.

Usage Analysis: Customers with low usage hours were more likely to leave.

Key Insights

1. Basic plan customers are at greater risk of churn.
2. Premium customers remain loyal longer.
3. Higher product usage increases retention.
4. Customer support quality influences satisfaction.

Recommendations

1. Launch retention campaigns for Basic plan users.
2. Introduce loyalty rewards.
3. Improve customer support.
4. Encourage product engagement through promotions.

Conclusion

Customer engagement, subscription plan, and tenure significantly influence retention. Businesses can reduce churn by focusing on customer experience and long-term engagement.
