

Customer Retention & Churn Analysis

Project Overview

This project analyzes customer subscription data to identify churn patterns, retention trends, and customer behavior.

Tools Used

- Microsoft Excel
- GitHub

Dataset

Customer Churn Dataset (CSV)

Key Findings

- Basic plan customers showed the highest churn rate.
- Premium customers had the highest retention.
- Customers with low usage hours were more likely to churn.
- Long-tenure customers remained loyal.

Recommendations

- Improve engagement for Basic plan users.
- Offer loyalty rewards for long-term customers.
- Reduce churn through personalized retention campaigns.
- Improve customer support response times.
